

LAYER SAVER™

Layer Saver™ is a revolutionary new product that is going to change the way you ship, receive and store products — by allowing you to do more with the same resources.

This is a collapsible, reusable pallet shipping vessel made from recycled plastic material in line with the sustainability effort. You can claim many benefits such as cube utilization on your next vendor's scorecard! Layer Saver™ is available for lease without the "pooling" concept. You list the origin and destination and we'll do the rest.

Layer Saver™ is a 2-layered pallet shipping vessel made to withstand more weight than conventional wood or plastic pallets. Its unique design allows for the first tier to hold several rows of corrugated product (just like a traditional pallet) and then with its easy-to-extend Layer Saver™ second tier, the pallet expands its capacity to hold at least 25% (and sometimes 50%) more product all within the same footprint of a standard pallet!

With gas prices on the rise it is time to stop shipping trucks that are 50% AIR! Fill your trucks with product — that won't be crushed or damaged — and lower your freight costs today!
